

"Trusted Leaders in Traffic Safety"

Since 1966 

Inprotect Systems (Langley, BC)

Kevin Waddell, *General Manager*

Inprotect Systems is a multi-function sign provision company with its own manufacturing capabilities. Our strength lies in the fact that we are set up to provide a complete process of sign project management from design and site surveys through to manufacture, rentals, and installation.

We have long-standing supply and install contracts and relationships with the Ministry of Highways, various municipalities, and highway maintenance contractors. We provide signs and road traffic devices to a varied range of industries such as airports, hospitals, and infrastructure. Our relationships are a reflection of the capabilities and services we are able to provide.

We operate a large diverse rental fleet of traffic control-related devices. These items include message boards, arrow boards, speed trailers, and crash trailers. We also rent delineators, barricades, signs and stands, crowd-control fencing, barricades, water barriers, and much more.

In addition to the previously mentioned services, we have a Traffic Management division that generates professionally prepared Traffic Management Plans (TMP) consisting of AutoCAD drawings and written strategies. Our engineering department consists of a draftsman, a traffic engineer, and a professional engineer.

Inprotect Systems is a division of the Alberta Traffic Supply group of companies (10 divisions including Inprotect), and is Western Canada's largest sign manufacturer and road traffic service provider. As Western Canada's largest 3M-approved sign and decal fabricator with 42 years in the sign industry, we have the infrastructure, the resources, and the reliable and professionally trained staff to ensure the timely and cost-effective provision of resources to projects of this nature.
